Phi Nguyen • Sr.Devops Engineer

Nguyen Dinh Phi ● (84) 989 328 256 ● fizz.uet@gmail.com ● https://github.com/wisphill ● Linkedin https://linkedin.com/in/wisphill

SKILLS

Software Engineering: Experienced in designing, implementing, and managing full-stack solutions across diverse tech stacks and cloud-native environments.
Programming language: Proficient in Golang, Rust, Python, NodeJS, Java, C#, Bash, and JavaScript/TypeScript
Frameworks: Java Spring, Go Gin, Go GRPC, NestJS
Data structure and algorithms: Solid foundation in problem-solving and providing efficient technical solutions.
AWS: Hands-on experience with a wide range of AWS services, focusing on integrating them to meet project-specific needs.
SysOps: Strong understanding of system administration, including monitoring, performance tuning, security, and disaster recovery.
Kubernetes: Proficient in containerization and orchestration, with experience managing Kubernetes resources in production.
Blockchain: Experienced in analyzing and building solutions for specific business use cases across different blockchain platforms.
Project Management: Capable Scrum Master with experience in team coordination, task delegation, and supporting team members to reach their goals.
English: Proficient in English (both verbal and written communication).

WORK EXPERIENCE

Sotatek JSC

Sep 2017 - July 2024

Roles: Senior Devops / Platform Engineer / Team leader
Joined Sotatek JSC as a fresh graduate and progressed to Senior DevOps Engineer / Team Lead, being entrusted with key technical and leadership responsibilities across multiple projects and technology stacks for clients in Singapore, Malaysia, and Australia.

Collaboration Better The World

July 2024 - Jun 2026

Roles: Senior Platform Engineer
Joined CBTW as a Senior Platform Engineer with a hybrid role across infrastructure and Golang backend development, collaborating with Deputy, a large enterprise customer in Australia.

Freelancer

July 2026 - Current

Worked as a freelancer, contributing to build a 3D Unity game, handling whole infrastructure and the gameplay

OUTSTANDING PROJECTS

Farmville

Feb 2026 - Current

Position: Senior Platform Engineer
Description: A networked multiplayer simulation blending city planning with agricultural management. Players grow their farms, expand into bustling cities, and collaborate - or compete - across a shared world
Responsibilities:

- Designed, implemented, and maintained social and reward microservices to support player interactions and progression systems.
- Built and configured a Kubernetes cluster from scratch, establishing the foundational infrastructure for deploying and operating game services.
- Implemented observability infrastructure to monitor service health, performance, and operational reliability.
- Designed and maintained CI/CD pipelines to automate the build, test, and deployment workflows for microservices.
- Contributed to multiplayer gameplay development, including networking, player camera handling, and character movement.
- Contributed to the assets development for the player base model and the farm map.

Technologies used: Unity, C#, Blender, Go GRPC, Kubernetes

DEPUTY - Cloud-based Workforce Management Software Project

July 2024 - Jan 2026

Position: Senior Platform Engineer (CBTW in collaboration with Deputy)
Description: Maintained and built utility tools to streamline daily developer workflows and optimized cloud infrastructure.

Responsibilities:

- Developed and maintained utility tools to enhance developer productivity and provided technical guidance on their usage.
- Migrated the bastion host scripts following microservice architecture.
- Architected and implemented an event-driven architecture to migrate existing workflows to AWS MSK.
- Built a production data sandbox environment from scratch to support safe vendor testing and development.
- Worked closely with leaders for all feature implementation, production issues, networking issues.

Technologies used: All AWS services (MSK, ECS, EC2, ...), MySQL, Golang, Datadog, Jenkins

PETRONAS eWallet

January 2020 - July 2024

Position: Team leader | Senior Platform Engineer (Sotatek JSC in collaboration with Setel)

Description: Developed a high-performance, secure e-wallet application managing payments and top-ups through seamless payment gateway integration.

Responsibilities:

- Collaborated closely with the SRE team to ensure optimal performance and reliability of wallet services in production.
- Led and mentored a cross-functional team to achieve technical tasks and business objectives defined by the Product Owner.
- Monitored, reviewed, and enhanced service compliance, security protocols, and performance bottlenecks.
- Leveraged Kubernetes to orchestrate and scale microservice resources efficiently.
- Designed microservices architecture for core modules including api-wallets, api-payments, api-on-street-parking, and various SDKs.
- Implemented features on the admin portal utilizing ReactJS and AngularJS.

Technologies used: NestJS for microservices, MongoDB cloud, Newrelic, Grafana, Loki, Kubernetes with Lens, Kafka cloud, RMQ, Redis, Gitops ArgoCD, Gitworkflow.

Carbon Offset Project

May 2022 - Nov 2023

Customer: Australia

Position: Senior Devops engineer (Sotatek JSC)

Description: An environmental initiative focused on tracking and mitigating industrial carbon footprints by collecting and analyzing emissions data for various organizations.

Responsibilities:

- Solution Analysis & Optimization: Evaluated implementation strategies by analyzing pros, cons, and cost-efficiency to select the most optimal technical solutions.
- Multi-tenant Infrastructure: Designed and built a scalable multi-tenant infrastructure tailored for the project's diverse client base.
- Maintained and enhanced cloud infrastructure leveraging AWS ECS clusters.
- Planned and executed the migration, centralization, and routing updates for all domains and Load Balancers.
- Established comprehensive monitoring tools and alerting systems; served as the primary on-call engineer for 24/7 system reliability.
- Quickly detecting issues for B2B customers.
- Being a release manager based on company processes, finding defects, and reporting quickly to the manager and developers.
- Analyzed system architecture to develop and implement strategic plans for reducing operational overhead and cloud expenditures.
- Provided technical leadership and guidance to Associate Developers and DevOps Engineers to ensure project milestones were met.

Technologies used: Bash, Python, AWS services, Terraform, Buildkite, Kafka, NodeJS, Clojure.

ISOLA Dex

Jan 2021 - June 2021

Position: Team leader | Senior DevOps engineer (Sotatek JSC)

Description: Built a decentralized exchange (DEX) for selling, trading tokens based on the Solana platform.

Responsibilities:

- Led a technical team in building and deploying a comprehensive DEX system for a UK-based client.
- Architected and implemented automated CI/CD pipelines using GitHub Actions to streamline deployment.
- Engineered the core smart contracts using Rust, ensuring security and efficiency on the Solana network
- Developed key features for both the administrative portal and the user-facing interface using ReactJS and NextJS.

Technologies used: Bash, GitHub Actions, AWS EC2, Rust, NodeJS, NextJS

Bunicorn

December 2020 - March 2021

Position: Middle DevOps engineer (Sotatek JSC)

Description: A blockchain game that is based on the BSC Chain

Responsibilities:

- Architected and deployed the entire Amazon EKS infrastructure across three environments (Dev, Staging, Production).
- Established a robust CI/CD pipeline leveraging CircleCI for integration and ArgoCD for GitOps-based continuous deployment.
- Utilized Terraform to provision and manage AWS resources, including Auto Scaling Groups, Load Balancers, and Route53 domain configurations.
- Proactively monitored, maintained, and optimized system performance to ensure high availability for the gaming platform.

Technologies used: Bash, AWS services, Terraform, NodeJS.

JIRA GANTT Chart Plugin

May 2019 - December 2020

Position: Middle DevOps engineer (Sotatek JSC)

Description: Built a GANTT chart plugin for JIRA that supports a specific JIRA dashboard.

Responsibilities:

- Designed and implemented a serverless backend using AWS Lambda, DynamoDB, and API Gateway, managed via the Serverless Framework.
- Developed and optimized GANTT chart functionalities within the JIRA environment using Java.
- Improved the plugin's user interface and features using ExtJS and pure JavaScript.

Technologies used: AWS serverless services, ExtJS, pure Javascript, Grunt.

PREVIOUS PROJECTS

Sotatek JSC *(Software engineer)* **May 2017 - July 2019**

Input test case generation for C and C++ code (2017): Responsible for the function code coverage feature of a generating test case application.

Android Application (2017): The personal project that was built for a music player with Gif image. It supports Android version 4 upper. Available on GitHub.

Health and insurance system (2017-2018): Responsible for setting up core components for a desktop client application that is used by the Japanese hospital system. Because it is a C# application, I focused on its performance and component rendering time.

VCC Exchange: Core service and SDK (2018) : Responsible for implementing communication SDK between services and all currency-based blockchains (BTC, ETH, EOS, etc.), transfer, and deposit features to the VCC centralized exchange.

OneCard: Java (2018-2019): Implemented the code foundation of our service using Java Spring then integrated it with the core blockchain SDKs of **VCC Exchange**

DPOS Blockchain (May 2018 - May 2019): A new blockchain bases on the DPOS consensus, responsible for Trie logic to maintain the blockchain state based on the DPOS consensus**,** contributing for RPC node finder, the consensus, generating blocks, transaction selection, networking on blockchain.

OTHER EXPERIENCE & INTERESTS

- Core blockchain, smart contract developer
- Game developer with Unity 3D for a personal private project - a cozy game
- Interests: Sketching, drawing, and visual design

ACHIEVEMENTS

- AWS Certified Solutions Architect – Associate (2023)
- Sotatek Award of the year (2021)

EDUCATION

University of Engineering and Technology - Vietnam National University

Major: (UET) Information Technology (2014-2018). GPA: 3.2
